## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 11, 2005 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 23-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Scholten et al. (4,969,888). Scholten et al. disclose, in figures 21-28 and in col. 5, lines 43-58 and col. 7, line 26 to col. 8, line 45, a method for treating a bone, where the method includes selecting for treatment a bone (a vertebral body) including a fracture region defined by cortical bone surfaces that have collapsed upon themselves to displace away from a desired anatomic orientation another region of the bone remote from the fracture region (e.g., the upper and lower regions or superior and inferior regions of the vertebral body), deploying an

expandable body (76) at the distal end of an elongated body (77) and enlarging the expandable body into an enlarged condition into an enlarged condition within the fracture region to move the collapsed cortical bone surfaces in the fracture region apart to move the collapsed cortical bone in the fracture region apart to move the other region of the bone toward the desired anatomic orientation (see fig. 28), where the expandable body is deployed in a collapsed condition through a percutaneous access path (at 30), and where the expandable body is enlarged or inflated by fluid pressure (a contrast medium).

#### ***Response to Amendment***

4. Scholten et al. (4,969,888) does teach or suggest the method as claimed.
